**Subject:** data release

Just so we are clear:

Level 2 data validation of all data collected through Aug 9 th should be completed by 5pm. They started at 5:21am and have been working hard since. The ESAT data looks good. The data from the local Durango lab will take some time to process.

We should be able to process it all in 2 hrs.

That means that by 7pm, we will be sending out raw data tables that match the format that was used during our response to the Deepwater Horizon Spill. This format was suggested by OEM and approved by the Environmental Units in all 3 Regions.

This data will be distributed to EPA HQ OEM and the Region 8 Environmental Unit for review.
